Community Health Survey Results

The Community Health Survey for Harnett County was conducted in Spring 2019. A total of 577 individuals were surveyed. After data cleaning (including listwise deletion of incomplete survey responses), the final dataset included 443 responses. Surveys were collected using a combination of household canvassing using addresses randomly selected from a Two-Stage Cluster Sampling process (122 surveys) and online, self-administered convenience sampling (321 surveys). Much of the data loss from the cleaning process is attributed to surveys started by non-residents and surveys in which participants completed less than 5% of the online survey.

The Community Health Survey for Harnett County is a collaboration between Harnett Health, Harnett County Health Department, the Healthy Harnett Coalition, and the Department of Public Health at Campbell University.
